BlueTooth Pairing with Window Mobil 2003 Second Edition (WM2003)

These instructions was generated for a Dell Axim 30, Your steps should be similar

1. Turn on blue tooth by tapping on the blue tooth icon on the bottom of the Start screen.
2. Select setting, the connections
3. Select bluetooth, a bluetooth general window comes up.
4. At the bottom of this window, tap Bluetooth manager.
5. At the bottom of this window tap new, The Blue Tooth Connection Wizard is shown You should have several choices:
A. Active Sync via blue tooth
B. Browse files on remote device
C. Hand free/Headset setup
D. Connect to a network
E. John a personnel network
F. Exchange Business cards
G. Explore a Bluetooth Device (this is the one you what to select)

6. Then hit next, it should search for a device. The Aircable should come up. If it does not select one of the other bluetooth devices by holding down on it until you get a menu that has icons, list or refresh. Tap refresh. This should show only the devices that you have stored.

7. If Aircable comes up select it and if the next menu for Authentication pops up great, if not hot next.
8. In the Authentication menu enter 1234(default) or which ever pin you had me configure your device for as the passkey number
9. It will then give a selection of device type, which should be serial ports. Highlight the serial port one then click next at the bottom of the screen. Leave the Use a secure, Encrypted connection unchecked.
10. Then chick finish on the next screen.

This should complete that pairing steps.
